Introduction to Financial Literacy

James Randolph, CEO

Financial education is key to avoiding many of the challenges American families face today. Without this knowledge, people often find themselves living paycheck to paycheck, with crushing debt and lacking the savings to rise above their current circumstances.

We've found the best way to push out financial education to the people who need it most is through community outreach and the people they know and trust. To effectively end financial illiteracy in these country, it will take a coalition of lime-minded individuals and organizations working together.
